

# THE FUTURE OF HI-FI

The way we find, store and listen to music has changed. It's time to upgrade to a next-generation sound system

**UNTIL RECENTLY, THE** concept of listening to digital music stored on a hard disk drive or streamed from the internet was anathema to audiophiles and hi-fi enthusiasts. But now, through Naim's array of state-of-the-art systems, you can enjoy true high-fidelity sound and the choice and convenience that inspired the digital revolution.

Naim's state-of-the-art range includes high-end, upgradeable separates units as well as compact combined systems, ensuring there's a perfect solution for any home, large or small. Furthermore, they can easily be networked to form part of an exceptional-sounding multi-room system. This is simply the future of hi-fi.

## HIGH-END SEPARATES

**Naim's HDX and NDX prove that digital music really can exist in the audiophile domain. Taking control of all aspects of the digital music realm, these beautifully designed components have got ripping, storage, streaming and control covered. Just sit back, relax and browse your extensively catalogued music collection as your home listening experience is transformed – and you can even use them with Naim's intuitive apps.**

### Naim NDX

#### Stream superior quality audio

This versatile digital player allows you to access audio files from a wide variety of digital sources, including iTunes libraries and NAS drives via a wired or wireless UPnP connection, Apple devices via USB and internet radio stations through an existing internet connection. The NDX can also be controlled from Apple devices using the n-Stream app.

- ▶ Stream from music servers, NAS drives and PCs or Macs using Ethernet or Wi-Fi
- ▶ Compatible with high-resolution 24bit/96kHz streams and key file formats, including WMA, MP3, AAC, Apple Lossless (from iPod), WAV, FLAC, AIFF and Ogg Vorbis
- ▶ Onboard DAC with three independently selectable 24bit/192kHz-capable S/PDIF inputs

### Naim HDX

#### The ultimate digital player

The HDX has a built-in CD drive and a hard disk drive, allowing it to rip, store, catalogue and play your music in superb quality. There's enough storage space for up to 1200 uncompressed albums, with full metadata support for track information, and the HDX will also scan for and then play music stored on devices on your network.

- ▶ 1TB hard drive, with Naim-designed ripping engine and Naim Extended Music Database
- ▶ Playback of 24bit/192kHz files via front-panel USB
- ▶ An HDX-SSD variant is available for people who prefer to store their music solely on their network
- ▶ Control via the full-colour touchscreen display, remote, PC or Mac or the n-Serve app

## ULTIMATE UPGRADES

**If you want to experience and enjoy even greater performance from your digital audio system and gain access to further digital sources, Naim's carefully thought out upgrade path will take you there.**

### Naim DAC

#### An instant sonic boost

No matter whether your digital source is a PC or Mac, or an HDX, NDX or CD player, this superb DAC will sweeten its sound by eliminating annoying S/PDIF jitter and digital 'noise'. The DAC brings digital music to the audiophile realm.

- ▶ An ideal upgrade for HDX, NDX, S/PDIF-equipped CD players, Apple devices and more
- ▶ Eight 24bit/192kHz-capable S/PDIF inputs for device support and flexibility
- ▶ High-performance output stage

### Naim Power Supplies

#### Purify your sound

Adding a separate power supply to your system will improve the timing, clarity and dynamic range of your music. The XPS (above) and 555 PS in particular are ideally matched to the HDX and NDX, as well as many other separates sources.

- ▶ Each power supply features a single large toroidal transformer
- ▶ Available with up to seven ultra-low noise outputs and power regulators
- ▶ Sleek, anti-vibration, resonance-controlling design

**Putting you in control**  
Naim's n-Stream and n-Serve apps allow you to browse your music and control selected Naim devices using an iPad, iPhone or iPod Touch
